

Team 4(CodersDen)

Project Name - QuickGrab

1.Sharvari Dalvi

2.Jayant Ukey

3.Sakshi Dhote

4.Aritra Lahiri

QuickGrab is a website from where you can order food items by nearby restaurants. This portal allows multiple customers to buy the food items of their choice at the reasonable price.

This project is to be implemented using Spring Boot and MySQL .

Modules

- Seller Registration and Login -> The Seller will register itself and will create an ID for login purpose.
- Buyer Registration and Login -> The Buyer will register itself and will create an ID for the buying purpose.
- Food List -> It will consist of the food products which are being sold by restaurant's owner and will be showcase to customer's to buy. It will consist of all details of the foods as well.
- Cart Feature -> The food items selected by the customers will directly get added to the Cart for the further purpose.

Key features

- This project will contain the food items from various restaurants.
- Being online it is available to users till 12 AM.

Future Scope

- Payment Method - Through Credit/Debit Card and UPI.
- Admin module will be able to monitor restaurant and customer.

Project Flow
